Medistri's Medical Device Sterilisation - Medistri

Medistri's Medical Device Sterilisation

At Medistri, we understand that terminal sterilisation requires uncompromising sterility assurance while safeguarding the integrity and validity of your medical devices. That's why we've made it our mission to provide cutting-edge sterilisation solutions that integrate seamlessly into your operations.

Medical Devices Sterilisation is essential to prevent infections and protect patient health. Adhering to standards like ISO 11135 for EO sterilisation ensures rigorous validation and controls, guaranteeing sterility and maintaining the highest levels of safety and reliability.

By combining the expertise of our laboratory, sterilisation, and quality teams, we enable you to streamline your product development process without disruption. With Medistri's advanced technologies and modern processing plant, we ensure your medical devices and components are sterilised efficiently while preserving their durability and functionality.

Stay Focused on Growth

Whether you're a startup or an established enterprise, our transparent sterilisation process allows you to track your products every step of the way. You'll know exactly when they're ready to leave our facilities, giving you peace of mind and more time to focus on scaling your business.

Why Choose Medistri's Sterilisation Infrastructure?

- Temperature-sensitive product sterilisation.
- Compatibility with diverse product types and materials.
- Support for multiple packaging configurations.
- Immediate product release post-processing.
- Scalable solutions for high-growth companies.
- Efficient and fast turnaround times.

Tailored Sterilisation Technologies

Medistri offers specialised sterilisation solutions for a wide range of medical devices and components, including:

- Temperature-sensitive medical devices
- Devices with integrated electronics or batteries
- Polymer-based devices
- Implants
- Surgical kits
- Single-use medical devices
- Metallic surgical instruments
- Ceramic-based products
- Drug-device combination products

Commitment to Excellence

At Medistri, we're committed to staying at the forefront of innovation and quality. Our continued investment in advanced sterilisation technologies ensures we meet and exceed the evolving requirements of the healthcare industry.

One of the key standards we adhere to is ISO 11135, which governs the sterilisation of healthcare products using ethylene oxide. This international standard provides a comprehensive framework for validating processes, implementing controls, and using the necessary materials to ensure sterility.

By following ISO 11135, we minimise risks and ensure that all products sterilised at our facilities are safe, reliable, and compliant with the highest standards of quality and safety.
