### Strengthening Supply Chain Resilience

August 19th 2025

#### A Dual-Site Advantage

In today's global healthcare industry, supply chains are under pressure. Recent US trade policies underscore the importance of building resilience into every stage of the value chain. For pharmaceutical, biotechnology, and medical device companies, uninterrupted access to critical services is essential.

Medistri operates from two strategic locations: Switzerland and Hungary. This dual-site model is not simply about geography, it is about ensuring continuity, flexibility, and security for our customers, regardless of macroeconomics changes.

#### Switzerland: Proven Excellence

Our headquarters in Domdier, Switzerland, serves as Medistri's main hub for sterilization, laboratory testing, packaging validation, and manufacturing services. It is where our core operations were established, and it remains the cornerstone of our international partnerships.

#### Hungary: Strategic Resilience

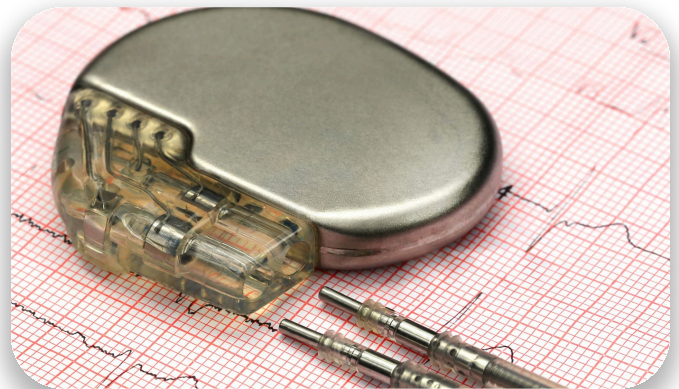

Our site in Székesfehérvár, Hungary, expands our sterilization and laboratory capacity and adds an important layer of resilience for our customers.

Medistri Hungary and Medistri Switzerland operate under the same infrastructures, equipment, QMS, and centralized management in Switzerland. Our customers, who use both locations benefit from:

- Mitigated diversification of macroeconomic policy changes.
- Continuity of sterilization and laboratory operations even under shifting supply chains.
- Flexibility by aligning operations where speed, capacity, and regulatory compliance converge.

See how Medistri can align with your supply chain contingency strategy by contacting your Customer Success Specialist, or email us at [contact@medistri.com](mailto:contact@medistri.com).

#### Validating Backup Capacity

By validating our operations across Switzerland and Hungary, Medistri provides their customers a supply chain that is built to withstand uncertainty.

Whether driven by tariffs, logistics challenges, or capacity needs, our dual-site strategy ensures healthcare innovators always have a trusted partner they can depend on.
