

Providing Sterilization & Laboratory Services
for the world's most innovative healthcare
companies.

FOR IMMEDIATE RELEASE- September 21st 2026

BatchProtect™: Additional Protection for High-Value Healthcare Products

EN - Medistri, a provider of contract sterilization, laboratory, packaging validation, manufacturing, logistics, and consulting services for the healthcare industry, has introduced BatchProtect™, an optional contractual service designed to provide an additional layer of protection for eligible high-value healthcare products and critical production batches processed at Medistri.

Healthcare products can represent significant investments in manufacturing, components, assembly, testing, packaging, logistics, and regulatory preparation before sterilization begins. For manufacturers managing high-value products or critical production batches, the potential financial impact of product loss can therefore be significant.

BatchProtect™ gives eligible customers the option to add contractual protection against certain direct physical loss or destruction occurring during eligible operations within Medistri facilities, subject to confirmation by Medistri and the applicable contractual conditions.

The service is based on the declared replacement value of the products and can be adapted to the specific characteristics of the customer, product, batch value, processing requirements, and requested level of protection.

BatchProtect™ is an optional contractual service and does not constitute an insurance product. Founded in 2006 and headquartered in Domdidier, Switzerland, Medistri operates in Switzerland and Hungary, providing integrated sterilization and laboratory services to companies in the medical device, pharmaceutical, and biotechnology sectors.

For more information about BatchProtect™ or to discuss a tailored arrangement for your products, please contact your dedicated Customer Success Specialist or contact contact@medistri.com.

#Medistri

"Healthcare products often represent years of development and significant investments before they reach sterilization. BatchProtect™ was developed to provide customers managing high-value products with an additional option that supports confidence and peace of mind throughout their outsourcing journey," said Sean Nilforoushan, Head of Business Development at Medistri.
